Georgia High School Projections and University System of Georgia Enrollment Growth are Predicted to Steadily Increase between 2014 and 2020

**Highlights:**

- The number of high school graduates in Georgia is expected to trend downward slightly until High School Academic Year 2015-16. Despite the decrease, the total percentage of graduates attending a unit of the University System of Georgia (USG) is expected to remain constant at 51%-to-52% of the total Georgia high school graduates.

- KSU’s total percentage of the USG beginning freshmen is expected to remain constant at 6%-to-7% given existing recruitment efforts. Improved high school graduation rates in Georgia, expanded facilities, additional parking, and target recruitment efforts could increase KSU’s overall beginning freshmen beyond the 6% average over the last five years.

- During the academic years in which KSU’s beginning freshmen decline, recruitment resources could be re-directed to attract new transfer students in order to offset the decrease.
